(54) EXHAUST DEVICE FOR MOTORCYCLE

(57)Abstract:

PURPOSE: To reduce the dimension of an expansion part by deforming the connection part with the expansion part of each exhaust pipe into rectangular form, in the exhaust device in which the individual exhaust pipe of a plurality of cylinders are extended and said exhaust pipes are collected in an expansion chamber and an exhaust control valve is installed into the expansion chamber.

CONSTITUTION: In an engine equipped with a plurality of cylinders mounted onto a motorcycle, an exhaust pipe 8 is extended independently from each exhaust port, and integrally connected and allowed to communicate to an expansion chamber 9. Though the front part of the exhaust pipe is formed into circular form, the part connected with the expansion chamber 9 is formed into square form 8a, and jointed with the expansion chamber having a rectangular section, contiguously each other. Since the exhaust pipes are connected, deformed into rectangular form, the projection in the transverse direction is reduced, and the dimension can be reduced.
